

STATE WATER RESOURCES CONTROL BOARD INVOKES TERM 91

Glenn-Colusa Irrigation District (GCID) would like to inform all water users that the State Water Resources Control Board (SWRCB) has invoked Term 91, effective November 1, 2025.

Under Term 91, affected water rights holders, including GCID, are required to cease diverting water from the Sacramento River system until the Delta returns to a “Balanced Condition.” GCID will be required to suspend all deliveries to District water users as of November 1st, unless and until Term 91 is revoked.

The timing of when the Delta returns to a Balanced Condition is dependent on weather and hydrologic conditions, and as such, GCID cannot predict when the State Water Board will lift the restriction and allow diversions to resume.

GCID will continue to closely monitor conditions and provide updates to water users as new information becomes available. GCID appreciates your understanding and cooperation as the District complies with state requirements and continues to manage water resources responsibly.

For more information or updates, please contact GCID Water Operations at 530.934.8881 or visit www.gcid.net.
